Your challenge: Finding the right people

SeaTrust-Real360 is a virtual reality (VR) based ship training simulator that enables immersive and intuitive ship training. Using the simulator, trainees can experience working with the actual hull structure and equipment arrangement without time and space restriction. They can easily learn about ship management on the VR screen, which displays international ship operation, safety, maintenance, and inspection requirements through text, images, and videos. Moreover, various information displayed on the VR screen can be quickly composed using the data integration tool provided with the simulator and stored in the database. The VR screen is displayed on the computer monitor screen with the latest VR headset, providing a more immersive experience.
